# Expo

Was used as it is a framework and platform for hosting apps on both iOS and Android Devices

React Native

Was used as it is an open source UI framework that allows apps to be developed for both iOS and Android Devices
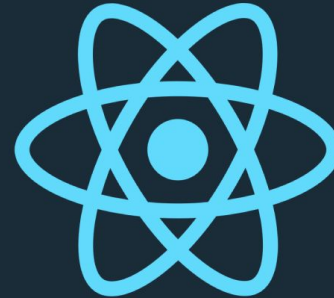

TypeScript

It is a programming language used by React. It is a superset of JavaScript. It was mainly used to develop Dash Warning.

JavaScript

It is a programming language used by React. It was used during the development of Dash Warning.

Node js

It is an open source development platform for executing JavaScript. It was used when developing Dash Warning.

Visual Studio Code

It is an IDE that was used to code and develop Dash Warning using JavaScript (JS) and TypeScript (TSX).

GitHub, Git & GitBash

GitHub is used for version control of data by using Git and GitBash to commit files from my desktop. It was heavily used in the development of the app.

Scrumwise

It is a scrum tool that helps teams to manage their workload. It was used in this project to keep me on track.
